

Amir Yekta

Strategic Tech-Architect & Clinical Specialist

Bridging healthcare expertise with advanced game development, AI orchestration, and immersive XR technologies.

Medical: Clinical Informatics, Patient Safety Standards

Design & 3D:

Blender, ZBrush, Substance Painter, Marvelous Designer

Content production - 2D:

Adobe Series: AfterEffects, Photoshop, Illustrator, Audition

Other cases: Iclone, Character Creator, Maya, marmoset toolbag

Development: Unity, C#, Python

Other cases: Unreal Engine

AI & Systems: LLMs (Orchestration), ComfyUI, RVC, Training, RAG, Tuning

Strategic Tech-Architect & Clinical Specialist

Bridging Healthcare Expertise with AI-Driven Engineering & Immersive Systems

Clinical Informatics Expert with an academic nursing background and 7+ years of experience. I specialize in AI Orchestration: leveraging generative AI and modular architectures to translate complex protocols into high-performance digital solutions. My work ranges from XR Simulations (spanning General Education to Specialized Medical Training) to National-Scale Matching Systems, all engineered to maintain professional-grade quality under extreme infrastructure constraints.

Core Expertise:

Clinical & Med-Tech Innovation:

Specializing in Medical Simulation & XR for clinical training.

Translating nursing procedures into spatially accurate 3D environments (e.g., Cardiac Electrophysiology).

AI Orchestration & Architecture:

Expert in AI-augmented engineering: using LLMs and AI pipelines (ComfyUI, RVC) to automate and optimize development.

Architecting secure Multi-Agent AI systems for large-scale data matching.

High-Performance Game Engineering:

Full-stack Unity/C# development with a focus on Extreme Optimization.

Delivering 2K visual fidelity on low-end mobile hardware (<3GB RAM) for commercial titles.

Key Achievement Metrics

Commercial Product Delivery:

Published 3D Strategic Mobile Game: 2,100+ organic downloads with a 4.7% sales conversion rate on first release as a Demo version.

Performance Optimization:

Engineered high-fidelity 2K graphics optimized for a 160MB package on low-end hardware (<3GB RAM).

Modular Architecture:

Reduced code redundancy by 60% through AI-augmented system design.

Medical Technology Innovation:

Proprietary XR Engine:

Developed a synchronization engine for real-time medical education.

Spatial Computing:

Created a 3D visualization framework for cardiac electrophysiology (ECG leads as spatial cameras).

Dynamic Streaming:

Designed a server-to-headset pipeline to eliminate the need for local client updates.

AI, Data Science & Social Informatics:

National-Scale Matching:

Architected a secure, high-concurrency matching framework using Multi-Agent AI orchestration.

Predictive Modeling:

Built signal analysis models achieving 80-98% accuracy patterns.

Generative Pipelines:

Implemented ComfyUI/SD, SDXL/Flux and custom RVC models for 70% faster asset production.

Technical Communication & Strategic Expertise

Clinical Foundation: Leveraging an academic nursing background (U.S. Curriculum aligned)

3 years of experience - professional translation for medical and engineering fields.

Network R&D: Extensive hands-on experience in high-security server configurations and content delivery network (CDN) architectures to maintain infrastructure stability under extreme constraints.

Commitment: 450+ days of consistent professional English immersion (Duolingo-En: 106).

Dezhpad: Full-Cycle Game Orchestration

A hybrid Tower Defense game developed from the ground up.

- Execution: Solo design, 3D modeling, coding, and narration.
- Infrastructure: Bespoke online server and real-time management panel.

Interactive VR Systems & Medical Vision

Current Infrastructure: A fully functional VR environment featuring server-synchronized 3D models and real-time interactive media systems. Clinical Specialization: Designer of a conceptual framework for cardiac visualization, converting clinical diagnostics into immersive 3D spatial exploration.

Future Integration: Ready for AI-driven environment customization and procedural animation.

More Info: <https://sl1nk.com/900psgn>

Advanced Multi-Agent AI Architecture

Vision: A large-scale Social Informatics system designed for complex matching and demographic analysis.

Technical Core: Engineered a modular ecosystem featuring 12+ specialized AI Agents synchronized by a proprietary "Data Validator OS" to ensure logic consistency and data integrity.

Operational Agents: Implementation of Profiling, Matching, and Security agents to automate high-concurrency decision-making.

Creative Automation: Leveraged Generative AI pipelines (RVC for custom narration and ComfyUI for 2K visuals) to create a high-fidelity interactive interface for the system.

Privacy Engineering: Designed secure database partitioning to protect sensitive user information during the analysis phase.
